

HydroComp, Inc.

FOR IMMEDIATE RELEASE
10 November 2007

PropCad™ 2007

HydroComp – Award winning marine propulsion software

"In a market where software has been notoriously poor and unreliable, HydroComp has produced the very best in the industry." - **METS Design Award jury**

Development in 2007 produced a number of new features for PropCad, including new calculations for wetted inertia and axial added mass (as presented by HydroComp staff to SNAME New England in June), new Section data fitting and smoothing options, the first "inspection report", presentation of additional propeller parameters, and more data exports (Unigraphics, Pro/ENGINEER). Of course, there were numerous smaller new features added to PropCad, such as improvements to data formatting.

We have a number of significant new features under development for 2008, with special focus on a new interface that is proving to be even more flexible, powerful and user-friendly.

- Interface improvements, including a streamlined main PropCad form.
- Graphical editing of section parameters and offset points.
- Additional support for manufacturing inspection.
- Introduction of calculations for wake adapted propeller design.
- More data exchange with third-party propeller codes.
- Miscellaneous other features and additions.

HydroComp, Inc. provides software products and consultancy services for the performance analysis and design of marine vehicles to industry, research and government clients. In 2007 - our 23rd year of service to the marine community - we are pleased to have provided our over 500 worldwide customers with unmatched products and services.
